

Multi-platform Remote Control

Support any number of **remote users** or **servers** across your network.

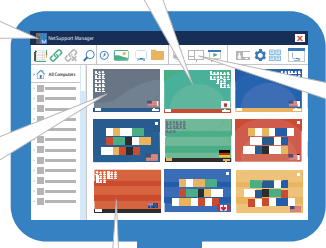

Used on over **13 million devices**

Send and Collect files to one or multiple PCs in a single action.

Group devices by OS, type, department even their **location**.

See **larger views**

Gather **Inventory**, even interact with active Services and Processes.

NetSupport Manager provides **supporting admin tools**.

NetSupport features market leading **security**, from **encryption, security keys, smart card support** and full AD integration.

Full remote control, annotation tools and then even **record** the session for future playback. Show your screen in **real time** to others as a training tool.

NetSupport isn't limited to the LAN, it provides all of the tools needed to access from anywhere with our **HTTP Gateway module** that any organisation can deploy.

Even when on the move, NetSupport provides a remote access solution from **iOS, Android or Windows tablets**.

You can use NetSupport from an **iOS and Android Smartphone** locally over IP or remotely over http.

As well as **screen control**, NetSupport Manager can be used on the move to provide support, gather system **inventory, chat** with users and **more...**

User can **connect and remote control multiple devices** simultaneously.
